BUILT IN USA

Brent Mason Signature Overdrive/Distortion Pedal

The first Brent Mason Hot Wired Overdrive was the carefully-crafted collaboration between legendary studio ace Brent Mason and Brian Wampler. It took 18 months of adjustment to dial in the pedal to do what Brent needed in the studio. When your job is to lay down somebody's sound, you don't get the luxury of insisting that it has to sound a certain way, but you always have to sound great. After a lot of thought on how to do it right and ensure maximum flexibility for Brent's needs (plus tons of prototypes and input from Brent!), Brian designed a two-in-one pedal: the Hot Wired Overdrive, which let Brent make music his way. Let nobody say the Hot Wired Overdrive wasn't a legend in its time!

... but time marches on ...

The music scene changes, and so do guitarists' needs. Brent Mason is a legend, and people come to him for his work from all over. What Brent needed back when he and Brian first spec'd out the Hot Wired is a different sound and a different set of features compared to what Brent needs today. So back to the circuit "drawing board" Brian went, and the process started again. Several years have gone by and Brian has honed his craft continuously in that time.

This pedal, the Hot Wired V2, is the result: a new Hot Wired that keeps the amazing flexibility and functionality of the original, meets Brent's modern needs, and shows off some of Brian's modern tone-shaping capabilities to boot. Both channels received updated "Fat switch" functions, Channel One got a killer Blend control for maximum clarity, and the control layout is more accessible and intuitive than ever before. The Hot Wired V2 is the result of two amazing, practiced sets of ears applied to the task of making yet another legendary pedal for a legendary artist!

To get the most out of your new pedal, you'll want to become very familiar with the controls. The Brent Mason Hot Wired V2 Overdrive and Distortion features two channels, each with a unique control set. Channel One features four main controls and a switch: Volume, Overdrive, Tone, Blend, and Fat/Normal/Fatter. Channel Two features three main controls and a switch: Volume, Distortion, Tone, and Fat/Normal/Fatter. Each channel is adjusted independently, and remember that they will work great either separately or stacked together! I'll go over each control in detail, and offer some suggestions that will give you a great tone so you don't have to start from scratch unless you want to. Experiment and enjoy!

Bypass Switches – Simple enough, these relay based soft switches are wired up for true bypass switching to ensure that you don't have anything in the way when you disable either channel. Stomp on each channel's respective footswitch to turn the pedal on, and the LED indicator light will show that it's active. Channel One has a blue LED indicator light, Channel Two has a red LED indicator light. When both channels are on, so are both LEDs.

Volume – This control works the same on each channel, and simply allows for more or less volume. There's a great deal of this on tap, and if you like you can use it as a clean, fattening-up boost – Brent has used it like that in the studio and on the stage many times. It's great for kicking in your amp, or cranking up Channel 1 with low Overdrive settings and then hitting Channel Two's heavier sound hard. Channel Two has plenty of volume as well. It's up to you how you want to set up their relative volume levels.

Tone – This adjusts between a much darker, bassier sound at the fully counterclockwise position, to a very highs-forward, present sound fully clockwise. Channel One's Tone is a little bit more open sounding, while Channel Two has more of a focus on its specific areas – characteristics normally associated with overdrives and distortions, respectively. It's not a bad idea to start at noon and adjust in small increments from there to let your ears get used to the sound of the pedal as you raise or lower the Tone knob, on both channels. The Tone knobs work together with the Fat/Normal/Fatter switches to determine the overall shape of the sound.

Overdrive / Distortion – For better accuracy, these controls have been renamed to fit the channel they're on, but they still perform the function of raising the amount of dirt regardless of the name. When stacking the channels together, keep in mind that you can end up with way too much distortion if you crank both controls

Channel 1 Blend – This control works to go from a totally clean signal at fully counterclockwise to just the overdriven signal at fully clockwise. We think you'll find a lot of magic in the space between those two extremes, where you can dial in some great clarity, some cut-through of your great clean tone into the overdriven sound. If you like the Ego Compressor's blend functionality, you should love this! Raising the Blend does raise the overall volume, so watch out for that when you're still learning how the pedal works.

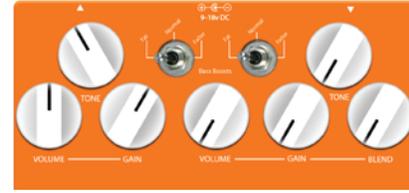

Fat/Normal/Fatter Switches – A big change from the original Hot Wired, Brian made sure to have two three-position switches, one per channel, and really hot-rod how they interact with the tone control. Normal is the middle position and doesn't affect the sound. Fat starts to add some low-mid punch. Fatter is for when you want to have a tone that's BIG! Perfect for dialing in each channel's sound individually to work with guitars that have an inherently leaner or fatter sound, they also contribute to a lot of flexibility on the Tone knobs since you can dial in more highs with the Tone set higher but then switch it to Fat or Fatter and ensure that you don't lose any of your midbass frequencies.

Suggested Settings

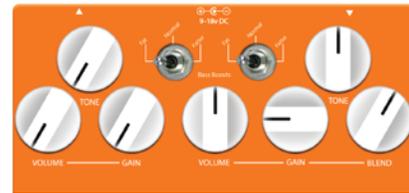

The BM Special

Hot Wired (live) - When Brent plays his signature tune live, he adds a little depth with the Overdrive, find the sweet spot on the blend and fly...

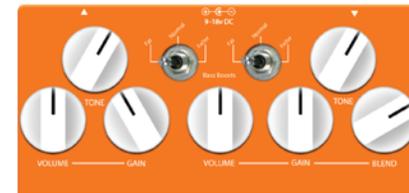

Blowin' Smoke - The gritty side...

Bread and Butter; country rhythm

The kind of tone we all fell for from Brent.

Stacked Dirty - But still clear and precise.

WAMPLER Pedals Limited Warranty. WAMPLER offers a five (5) year warranty to the original purchaser that this WAMPLER product will be free from defects in material and workmanship. A dated sales receipt will establish coverage under this warranty. This warranty does not cover service or parts to repair damage caused by accident, neglect, normal cosmetic wear, disaster, misuse, abuse, negligence, inadequate packing or shipping procedures and service, repair or modifications to the product, which have not been authorized by WAMPLER. If this product is defective in materials or workmanship as warranted above, your sole remedy shall be repair replacement as provided below.

RETURN PROCEDURES. In the unlikely event that a defect should occur, follow the procedure outlined below. Defective products must be shipped, together with a dated sales receipt, freight pre-paid and insured directly to **WAMPLER SERVICE DEPT – 3383 Gage Ave., Huntington Park, CA 90255, USA.** A Return Authorization Number must be obtained from our Customer Service Department prior to shipping the product. Products must be shipped in their original packaging or its equivalent; in any case, the risk of loss or damage in transit is to be borne by the purchaser. The Returns Authorization Number must appear in large print directly below the shipping address. Always include a brief description of the defect, along with your correct return address and telephone number.

When emailing to inquire about a returned product, always refer to the Return Authorization Number. If WAMPLER determines that the unit was defective in materials or workmanship at any time during the warranty period, WAMPLER has the option of repairing or replacing the product at no additional charge, except as set forth below. All replaced parts become a property of WAMPLER. Products replaced or repaired under this warranty will be returned via ground shipping within the United States freight prepaid. WAMPLER is not responsible for costs associated with expedited shipping, either to WAMPLER or the return of the product to the customer.

INCIDENTAL OR CONSEQUENTIAL DAMAGE. In no event is WAMPLER liable for any incident or consequential damages arising out of the use or inability of the possibility of such damages, or any other claim by any other party. Some states do not allow the seclusion or limitation of consequential damages, so the above limitation and exclusion may not apply to you. This warranty gives you specific legal rights and you may also have other rights which may vary from state to state.

FOR YOUR PROTECTION. Please complete the online warranty registration within (10) ten days of the date of purchase so that we may contact you directly in the event of a safety notification issued in accordance with the 1972 Consumer Product Safety Act.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experience radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's warranty to operate the equipment.

CUSTOMER SUPPORT. Our dedicated staff is ready to help you with any warranty or product questions – please email us at help@wamplerpedals.com or call us on (765) 352-8626

Please remember to register your pedal as soon as possible after purchase at the following web page to ensure quicker service if you should ever need to make a warranty claim:
